## Problem running example, loading help documentatio

Posted by acgetchell - 2008/06/01 23:45

---

First, after following the Eclipse install directions the Help for metABM doesn't load.

I can see there's an error with the setup. Using dynamic load one of the help topics is m2m\_SUBPROJECTNAME\_Developer Guide with a blank Javadoc underneath it.

(Also, if I do an update in Eclipse/Ganymede and include the UML2 updates Eclipse throws an internal error, which after looking at the logs seems to be because the org.eclipse.uml2.diagram.usecase/osgi.bundle can't be found in any repository)

Next, when following the tutorial exactly, the first model fails with a:

Fill Grid does not specify a projection.

But I've double-checked, I have it set, here's a screenshot.

(Don't get me started on how miserably this fails to work on my Windows laptop, wherein I get errors due to unloaded .jars just trying to setup an empty project).

Think I'm going to try a stable version of Eclipse next. However, the model error seems intractable ...

Help?

Here's the image which wasn't uploadable in the original formats.

[http://www.metascapeabm.com/components/com\\_fireboard/uploaded/images/FillGrid.gif](http://www.metascapeabm.com/components/com_fireboard/uploaded/images/FillGrid.gif)

P.S. Reloading Eclipse, the project is now totally borked.

Here's a small sampling of all the Eclipse errors generated once it was quit and restarted.

OK, I'll take a look as I can. The documentation stuff had some packaging issues as well so I'll revisit. UML2, eesh, don't get \_me\_ started. The plugin packaging is a mess. Neither oAW or metaABM actually require it, but the oAW GMF adapter uses it IIRC. Anyway, those internal errors are all too common and aren't likely to have any other effects..

Two requests.. First please post Eclipse version and config details. (e.g. EMF major version, oAW, etc..) Second, could you open a couple of bugs for this? <http://bugs.metascapeabm.com>

One more. Could you attach the .metaabm model file here?

Wanted to mention that the doc issue has been fixed.
